Software Engineer proficient in using AI agents and Skills to support software development, with experience building web and mobile applications, reusable UI architecture, and backend data pipelines.

PROFESSIONAL EXPERIENCE

BCR | Software Engineer Aug 2025 - Oct 2026

- Developed client portals, admin tools, and mobile applications for a financial trading platform, delivering account onboarding, wallet management, and partner reporting across web, iOS, and Android.
- Built reusable UI components and theme tokens for responsive web and mobile interfaces; shared IB and sales workflows across platforms, including client management, rebates, and referral tools.
- Implemented React Native/Expo trading interfaces for order placement, position management, and take-profit/stop-loss editing; integrated account-specific quote subscriptions and TradingView charts through WebView messaging.
- Delivered deposit, withdrawal, and transfer workflows tailored to regional and tenant requirements; integrated identity-document verification and reusable two-factor authentication across client and admin applications.
- Implemented a Next.js website redesign with live market prices, API-backed content, and 10-language localization; optimized mobile navigation and standardized responsive layouts and brand styling.

Radical AI | Software Engineer Intern May 2024 - Sep 2024

- Built AI educational tools using Google Gemini, LangChain, and Vertex AI, generating topic-specific quizzes and flashcards for 500+ users.
- Implemented MapReduce text summarization and used Docker with CI/CD pipelines to maintain consistent development and deployment environments.

Pai Technology | Backend Software Engineer Intern Jun 2023 - Sep 2023

- Designed a Python/Scrapy crawling service processing 400,000+ files and metadata for AI training; implemented error handling, resumable crawling, and deduplication.
- Refactored PostgreSQL schemas with SQLAlchemy, improving query performance by 35% and supporting daily updates.

Huaqiao Pharmaceuticals | Frontend Software Engineer Intern Apr 2022 - Aug 2022

- Developed responsive React, Bootstrap, and jQuery applications for clinical program information, supporting access for 2,500+ patients across hundreds of hospitals.

RESEARCH EXPERIENCE

Rutgers University | Research Assistant Aug 2021 - Dec 2021

- Refined GJK/EPA collision detection and extended a physics engine from 2D to 3D using hierarchical bounding volumes; built unit and integration tests with over 85% code coverage for real-time simulation scenarios.

TECHNICAL SKILLS

Frontend and mobile: JavaScript, HTML/CSS, React, Vue.js, Next.js, React Native, Expo, Reanimated

Integrations and tools: REST APIs, real-time price feeds, TradingView, Firebase Cloud Messaging, Git, Docker

Backend and AI: Python, Java, C++, SQL, FastAPI, Spring Boot, PostgreSQL, MySQL, SQLAlchemy, LangChain

EDUCATION

University of Southern California May 2025

M.S. in Computer Engineering | GPA: 3.78/4.0

Rutgers University - New Brunswick May 2023

B.S. in Computer Science | GPA: 3.67/4.0 | cum laude
